

Best Practices for Managing HEDIS Supplemental Data

Presented By:

Josh Hetler, *Executive Vice President of Sales and Marketing* – **DataLink**

THE RISE
ASSOCIATION

THE RISE
ASSOCIATION

We are a network of health care professionals addressing the challenges posed by the emerging landscape of value-based care and government health care reform.

OUR MISSION

Our mission is to provide a community for like-minded professionals to come together for networking, education, and industry collaboration to stay ahead and advance their careers.

ONE ASSOCIATION

Who We Are

ABOUT US

01

Founded in 2001, DataLink Software is a technology company that partners with healthcare organizations to simplify the transition to value-based care and manage shared-risk.

HOW WE HELP

03

- Quality Measurement & Reporting
- Risk Adjustment Accuracy
- Provider Network Performance Management
- Care Coordination
- Financial Reconciliation

OUR SOLUTIONS

05

- Evoke360
- EvokeEHR
- myEvoke360
- CareBook Connect

WHO WE HELP

02

- Payers
- Healthcare Providers
- Managed Service Organizations
- Fully-Insured / Self-Funded Plans

OUR TEAM

04

- Kevin Steele, CEO
- Michael Schopke, COO
- Jesse Dion, VP of Quality and BI
- Josh Hetler, EVP of Sales & Marketing

Poll Question

Evoke360

Common Problems We Solve

- Use of multiple systems
- Meeting value-based contract goals
- Supplemental data collection
- Interoperability issues
- Low provider usage
- Chart chasing

Why DataLink?

200K+ Connected Providers

20 Years Expertise

3:1 ROI

7+ Million Members

Nationwide Footprint

NCQA Certified

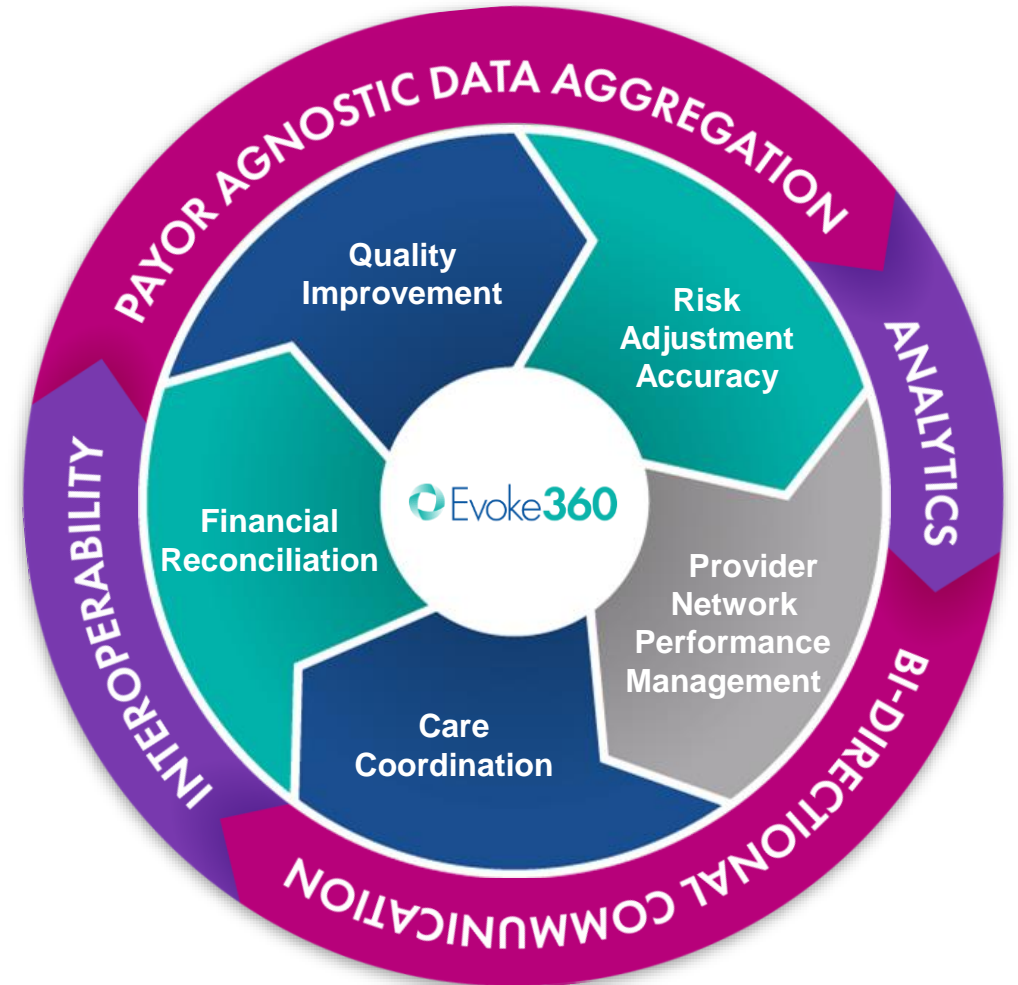

10K Recurring Users

87% Provider Utilization Rate

We Connect Payors, MSOs and Providers

Agenda

Supplemental Data – What is it?

Supplemental Data's Relevance to Quality/HEDIS

Supplemental Data's Various Sources | EHR, HIE and Non-Standard

Clinical Workflow | Chart Chasing, Faxing, Documentation and Non-Standard Uploads

Demo

What is Standard Supplemental Data?

- Electronically generated files from rendering service providers with clear policy and procedures for standard layouts
 - Layouts remain stable year after year; field and industry codes, all elements provided to meet measure specifications

Laboratory Results

Current or historical
state transaction
files & behavioral vendors

EHR
and/or eMeasure Vendor
Data

Immunization Data

What is Non-Standard Supplemental Data?

- Collected or created on an irregular basis by an organization or vendor; captures non-claim service data, encounters or standard electronically generated files
 - Must have clear policies and procedures describing how the data are collected, by whom, validation and reporting use

EHR Modules

Provider Portals

Health Information
Registries

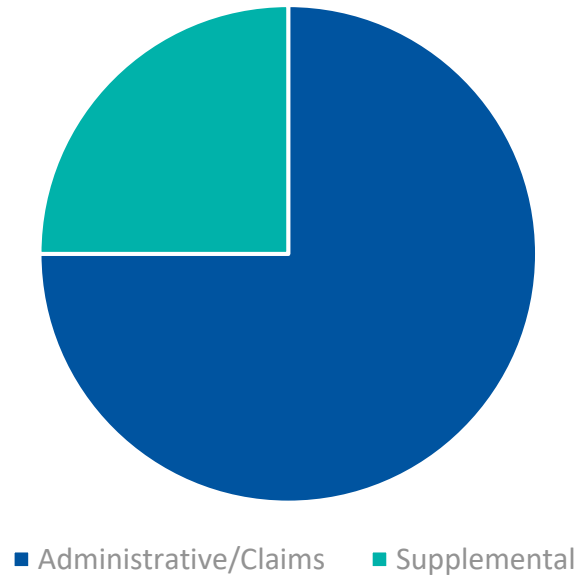

Provider Abstraction
Forms

Records/services
rendered
during home
healthcare visits

HEDIS Data Capture

HEDIS measures require claims submissions to track whether a gap was closed. However, clinical readings or test results do not show on a claim, therefore supplemental data are required.

Source: NCQA's Website

Why Do You Need Supplemental Data?

In order to capture the full picture of the patient's health, data from not only claims but from patient self-reported services may be needed to prove quality measure gaps were closed.

For example:

Why Do You Need the Readings?

Example: Hypertension Measure

- The claim shows that the patient received a blood pressure screening
- There is no way of knowing the actual blood pressure reading
- Vital signs are required in the form of a medical record submission to support the result and prove the patient has controlled hypertension

How Does a HIE Work?

Facility Electronic
Health Record

Data is uploaded in real-time or overnight with every new qualifying event.

Clinical measures are downloaded into the payer's files for review.

What if I'm Not Connected to an HIE?

- Hire staff solely for the purpose of gathering and entering facility data
- Engage a vendor that can extract HIE data within a one-source solution

Each facility or payer typically requires accessing multiple systems to accomplish supplemental data connectivity.

What Are the Available Non-Standard Data Collection Methods?

- Chart Chase/Retrieval from Payer
- Fax
- IT Team File Generation
- Web Portal Upload
- Population Health/Data Aggregation Platform

Poll Question

Key Takeaways

Develop Best Practices on How to Use Supplemental Data

Understand Supplemental Data's Relevance to Quality/HEDIS

Be Aware of Supplemental Data's Various Sources | EHR, HIE and Non-Standard

Clinical Workflow | Chart Chasing, Faxing, Documentation and Non-Standard Uploads
